1. Introduction

Lumos Logic HRMS is a cloud-based Human Resource Management System designed to simplify and automate core HR operations. It covers the complete employee lifecycle — from onboarding to exit — with real-time attendance tracking, biometric integration, leave management, payroll processing, and detailed reporting.

Supported Roles

Role	Description
Root Admin	Full access. Manages HR admins, org settings, and all data.
HR Admin	Manages employees, approves leaves and regularizations, processes payroll.
Employee	Applies leaves, checks attendance, views payslips, manages own profile.

2. System Overview

Lumos Logic HRMS is a web-based application accessible from any browser. It is built around role-based access, ensuring every user sees only what is relevant to their role.

Core Modules

- Dashboard
- Employee Management
- Attendance Management
- Leave Management
- Holiday Management
- Shift Management
- Regularization
- Biometric Integration
- Payroll
- Reports
- Notifications
- Organization Settings
- User Management

3. Module Details

3.1 Dashboard

Overview

The dashboard provides a real-time operational snapshot for HR admins and employees. It shows attendance status, pending approvals, leave summaries, and key metrics — all in one place.

Features

- Today's attendance KPI cards (Present, On Leave, WFH, Checked In, Pending Approvals)
- Live attendance feed showing real-time check-in status
- Pending leave and regularization approvals with one-click Approve / Reject
- Attendance trend chart (Last 7 / 14 / 30 days)
- Leave breakdown by type
- HR Insights — late arrivals, upcoming birthdays, new joiners
- Employee dashboard with personal attendance summary and leave balance

How It Works

When an admin logs in, the dashboard automatically loads today's attendance data, pending approval counts, and trend charts. Employees see their own summary — check-in status, leave balance, and recent announcements. All data updates in real time without requiring a page refresh.

Accessible By

✓ Root Admin <https://hrms.lumoslogic.com/root/dashboard>

✓ HR Admin <https://hrms.lumoslogic.com/dashboard>

✓ Employee (own summary) <https://hrms.lumoslogic.com/portal/home>

3.2 Employee Management

Overview

Centralized repository for all employee data. HR can add, edit, and manage every employee's profile and work information.

Features

- Add new employee with full details and auto-send welcome email with login credentials
- Edit employee information at any time

- Deactivate or reactivate employees (data preserved)
- Multi-department assignment — employee can belong to multiple departments with roles (Member / Team Lead / Manager)
- Import employees via CSV / Excel
- Export employee list as CSV
- Admin-forced password reset
- Assign reporting manager
- Assign employee to branch
- Biometric device PIN mapping
- Employee status management (Active / Inactive / On Leave)
- Search and filter by name, department, designation, status, branch

How It Works

HR creates an employee account by filling in basic details — name, email, department, designation, and joining date. The system sends a welcome email with login credentials. HR can then build out the full profile across all sections: personal info, education, experience, banking, documents, and more. Employees can also update their own profile sections.

Accessible By

✓ Root Admin

✓ HR Admin

<https://hrms.lumoslogic.com/employees>, <https://hrms.lumoslogic.com/root/employees>

The screenshot displays the 'Team Members' page in the HRMS system. The page title is 'Team Members' with a subtitle '8 of 8 members'. On the left, there is a sidebar with navigation options: Overview, Dashboard, Employee Management (highlighted), Departments, Onboarding, Exit Management, Attendance & Leave, Leaves, Calendar, Regularization, Holidays, Leave Policies, Shifts & Roster, and Admin HR (highlighted). The main content area shows a grid of employee profiles. Each profile includes a circular avatar with initials, the employee's name, role, status (Active), and full-time status. Below the profile information, there are buttons for 'View', 'Edit', and 'Delete'. The profiles are as follows:

Employee ID	Name	Role	Status	Full Time	Department	Joined Date
AB	Avan Bhalodiya	Team Member	Active	Full Time	Web Development	Aug 25, 2025
DS	DHRUV SHERE	Software Engineer	Active	Full Time	Web Development, SEO and Meta Ads	Jan 1, 2026
H	Hetanishi	QA Analyst	Active	Full Time	QA	Aug 26, 2025
KA	Khushi Ahajoliya	Team Member	Active	Full Time	Mobile Application Development	
NR	Nehal Rajput	Project Coordinator	Active	Full Time	Project Coordinator	Jul 8, 2026
PJ	Praizy James	Team Member	Active	Full Time	Human Resources	Jan 5, 2026
PP	Priyanshu Patel	Team Member	Active	Full Time	Web Development	Jul 10, 2025
RR	Riken Rachhadiya	Team Member	Active	Full Time	UI/UX and Graphics	Mar 24, 2025

<https://hrms.lumoslogic.com/root/employees/16>

The screenshot displays the HRMS Admin Console interface. On the left is a sidebar with navigation options: Overview (Dashboard), Employee Management (Employees, Departments, Onboarding, Exit Management), Attendance & Leave (Leaves, Calendar, Regularization, Holidays, Leave Policies, Shifts & Roster), and Admin HR (Sign Out). The main content area shows the profile of Priyanshu Patel, a Team Member in the Web Development department. It includes a profile completion bar at 25%, tabs for Overview, Personal, Professional, Education, Compensation, Compliance, Work, and Performance, and a grid of employee details such as Department, Position, Employment, Work Mode, Grade, Branch, Manager, and Joining Date. It also lists records for Family, Education, Experience, Skills, Banking, and Documents.

👁️ Employee (view and edit own profile) <https://hrms.lumoslogic.com/portal/profile>

The screenshot shows the HRMS Employee Portal interface for Priyanshu Patel. The left sidebar lists navigation options: My Workspace (My Dashboard, My Attendance, My Leaves, Team Calendar), Self Service (Regularization, My Documents, My Expenses, My Payslips), and Growth (Performance, Onboarding, Exit / Resign). The main content area features the user's profile with an 'Active' status, a profile completion bar, and tabs for Overview, Personal, Professional, Documents, Work, Payroll, Performance, and Account. The Overview tab displays key information like Employee ID, Department, Designation, Joining Date, Experience, and Reporting Manager. It also includes a 'Today's Snapshot' section with Attendance (Present), Leave Balance (0 Days), Current Shift (General Shift), and Performance (4.6 / 5). A 'Recent Activity' section lists events such as 'Checked In', 'Leave Approved', and 'Leave Approved' with their respective dates and times.

3.3 Attendance Management

Overview

Tracks daily work hours for all employees — through portal check-in or automatic biometric sync.

Features

- Employee check-in and check-out via portal
- Break In / Break Out tracking
- Gross hours, break minutes, and effective work hours calculated automatically
- Late arrival flag (auto-marked if check-in is after configured threshold)
- Early exit flag
- Admin manual attendance entry for any employee
- Admin edit of any attendance record
- Biometric auto-sync (attendance created from device punch logs)
- Attendance source tracking (manual / biometric / portal)
- Half day attendance support
- WFH attendance tracking
- Monthly calendar view for each employee
- Date navigation — HR can view any past date's attendance
- Live session tracking (estimates hours for currently checked-in employees)

How It Works

Employees check in via the portal or through a ZKTeco biometric device. The system records the punch time and calculates work hours at checkout. If an employee forgets to punch, they can submit a regularization request. HR can view the full org attendance for any date, edit records manually, and download reports.

3.4 Leave Management

Overview

Complete leave request and approval workflow covering all standard leave types.

Features

- Apply leave (full day, half day, WFH)
- Leave types: Annual, Sick, Casual, Emergency, Maternity, Paternity, Comp Off, WFH
- Date conflict check — system prevents overlapping requests
- Real-time leave balance per type
- HR approves or rejects with one click
- Employee can cancel pending leaves
- Email notifications on application and status change
- Attendance record auto-created when leave is approved
- WFH and half-day can coexist on the same day
- HR can apply leave on behalf of any employee
- Company-wide leave application (e.g., all employees — rain day, declared holiday)
- Leave history with full status timeline
- Google Calendar sync for approved leaves

How It Works

An employee selects the leave type, dates, and reason and submits the request. HR receives a notification and approves or rejects it from the dashboard. On approval, the system automatically creates an attendance record for those dates and deducts from the employee's leave balance. Both parties receive email confirmations at each step.

- Sick Leave: 12 of 12 day(s) remaining
- Casual Leave: 2.5 of 8 day(s) remaining (selected)
- Emergency Leave: 3 of 3 day(s) remaining
- Maternity Leave: 180 of 180 day(s) remaining
- Paternity Leave: 15 of 15 day(s) remaining
- Comp Off: Unlimited / no quota

DURATION: Cancel Submit Leave Request

3.5 Holiday Management

Overview

Manage the organization's official holiday calendar for the year.

Features

- Add holidays with name, date, and type (National / Regional / Optional)
- Full-year holiday calendar view
- Holidays are excluded from LOP and leave calculations
- All employees can view upcoming holidays

How It Works

HR declares holidays for the year. These are visible to all employees in the holiday calendar. When payroll is processed, declared holidays are excluded from loss-of-pay calculations automatically.

Accessible By

✓ Root Admin <https://hrms.lumoslogic.com/root/holidays>

✓ HR Admin <https://hrms.lumoslogic.com/holidays>

3.6 Shift Management

Overview

Define work shifts and assign them to employees or departments.

Features

- Create shifts with name, start time, and end time
- Configure late arrival threshold (grace period in minutes)
- Set working days (Mon–Fri, Mon–Sat, etc.)
- Assign shifts to employees or departments
- Roster calendar view

How It Works

HR defines one or more shifts for the organization. Each shift has defined start and end times. A late threshold determines when an employee is flagged as late. Shifts are assigned to employees and referenced during attendance and payroll processing.

Accessible By

✓ Root Admin <https://hrms.lumoslogic.com/root/shifts>

✓ HR Admin <https://hrms.lumoslogic.com/shifts>

✗ Employee

3.7 Regularization

Overview

Allows employees to raise attendance correction requests when a punch is missed or recorded incorrectly.

Features

- Employee submits regularization with date, correct times, and reason
- HR reviews and approves or rejects
- Approved regularization automatically updates the attendance record
- Email and in-app notifications at each stage

- Full regularization history per employee

How It Works

If an employee has an incorrect or missing attendance record, they submit a regularization request with the correct check-in and check-out times and a reason. HR reviews the request — optionally cross-checking biometric logs — and approves or rejects. On approval, the attendance record is updated immediately.

Accessible By

3.8 Biometric Integration

Overview

Automatic attendance capture directly from ZKTeco biometric devices (fingerprint / face recognition).

Features

- Compatible with all ZKTeco devices supporting the ADMS protocol
- Device registration with serial number, IP address, and branch
- Real-time online / offline device status
- Automatic punch log reception from device
- Punch type mapping: 0 = Check-in, 1 = Check-out
- Auto-creation of attendance records from processed logs
- Employee PIN mapping (device enrollment ID → HRMS employee)
- Raw biometric log viewer with filters (device, PIN, date)
- Reprocess unprocessed logs
- Support for multiple devices across multiple branches

How It Works

Each ZKTeco device is configured to push punch logs to the HRMS server. When an employee scans their finger or face, the device sends the punch data (employee PIN, timestamp, punch type) to the server in under 2 seconds. The system maps the PIN to the employee and creates or updates their attendance record automatically.

Accessible By

✓ Root Admin

3.9 Payroll

Overview

Salary structure management and monthly payslip generation with automatic LOP calculation.

Features

- Per-employee salary structure with effective date tracking
- Salary components: Basic, HRA, DA, Transport, Medical, Other Allowances
- Deductions: PF (Employee & Employer), ESI, Professional Tax, TDS
- Loss of Pay (LOP) auto-calculated from absences and half days

- Payslip generation based on actual working days per month
- HR reviews and publishes payslips
- Employee receives notification on payslip publication
- Employee can view and download own payslips
- HR can view all payslips by month and year

How It Works

HR selects the pay month and generates payslips. The system pulls each employee's salary structure, attendance records, approved leaves, and declared holidays to calculate the exact number of working days. LOP is deducted for absences and half days. The net salary is calculated after all deductions, and the payslip is published to the employee.

3.10 Reports

Overview

Export and analyse HR data across attendance, leaves, and employees.

Features

- Attendance Report — daily records per employee with hours, breaks, and status (CSV / JSON)
- Leave Report — leave history by year, month, status, and type (CSV / JSON)
- Employee List Export — full employee data export (CSV)
- Headcount Summary — total, active, and department-wise breakdown
- Analytics Dashboard — 7 / 14 / 30 day attendance trend charts
- Late Arrivals Report — today's late check-ins
- Monthly attendance summary per employee
- Department-wise filtering across all reports

How It Works

HR selects a report type, applies date range and filters, and either views the data on screen or downloads it as a CSV file. Attendance reports include all time-tracking fields — gross hours, break time, effective hours, and attendance source.

Accessible By

✓ Root Admin <https://hrms.lumoslogic.com/root/reports>

3.11 Notifications

Overview

In-app and email notification system that keeps all users informed of relevant events.

Features

- Bell icon with unread count in the navigation bar
- In-app notification feed (last 50 notifications)
- Mark individual or all notifications as read
- Delete notifications
- Web push notifications (browser-level alerts)
- Email notifications for key events

Notification Triggers

Event	Who Gets Notified
Leave applied	HR Admin
Leave approved / rejected	Employee
Regularization submitted	HR Admin
Regularization approved / rejected	Employee
Payslip published	Employee
Announcement posted	All employees
Expense approved / rejected	Employee
Asset assigned	Employee
Performance review initiated	Employee

Accessible By

- ✓ Root Admin <https://hrms.lumoslogic.com/root/notifications>
- ✓ HR Admin <https://hrms.lumoslogic.com/notifications>
- ✓ Employee <https://hrms.lumoslogic.com/portal/notifications>

The screenshot shows the Lumos Logic HR Admin Console interface. The sidebar on the left contains navigation links for various HR functions. The main area displays a list of notifications. The notifications are organized into two sections: 'THIS WEEK' and 'EARLIER'. Each notification entry includes a status icon (a yellow box with a white 'i'), a title 'Regularization Request', a description of the request (e.g., 'DHRUV SHERE requested attendance correction for 2026-07-23'), and a timestamp (e.g., '4d ago'). A 'Snipping Tool' window is visible in the bottom right corner, indicating a screenshot was copied to the clipboard.

3.12 Organization Settings

Overview

Configure organization-level details and system-wide settings.

Features

- Update organization name and logo
- Set unique login URL slug
- Configure working days (Mon–Fri / Mon–Sat)
- Set late arrival threshold (grace minutes)
- Manage leave type quotas
- Add and remove HR Admins
- Manage Root Admins

How It Works

The Root Admin accesses organization settings to configure how the HRMS behaves for their organization — working days, late thresholds, leave quotas, and branding. These settings apply org-wide and affect payroll, attendance, and leave calculations.

3.13 User Management

Overview

Manage all user accounts within the organization.

Features

- Add and remove HR Admins
- Add and remove Root Admins
- Reset any employee's password
- Force password change on next login
- View login history (last 15 logins with IP and device)
- Deactivate / reactivate accounts

Accessible By

✓ Root Admin <https://hrms.lumoslogic.com/root/manage-hr> , <https://hrms.lumoslogic.com/root/employees>

The screenshot shows the 'Manage HR Admins' section of the HR Admin Console. The interface includes a sidebar with navigation options like Overview, Reports, Employees, Departments, and Manage HR Admins (which is highlighted). The main content area displays a card for 'Admin HR' (HR Manager) with details like email (klara.dave@lumoslogic.com) and department (Human Resources). There is an 'Add HR Admin' button in the top right corner.

✓ HR Admin (employees only) <https://hrms.lumoslogic.com/employees>

The screenshot shows the 'Team Members' section of the HR Admin Console. The interface includes a sidebar with navigation options like Overview, Reports, Employees, Departments, and Team Members (which is highlighted). The main content area displays a grid of employee cards for 8 team members, including details like name, role, status, and department. There is an 'Add Employee' button in the top right corner.

3.14 Additional Modules

Performance Management

- Create and track personal goals with progress percentage
- Performance review cycles (annual / custom)
- Reviewer assignment and review status tracking

Onboarding

- Create onboarding checklist per new employee
- Track task completion with due dates

Exit Management

- Employee resignation submission
- Auto-calculation of last working day from notice period
- HR review and full-and-final status tracking

Expenses

- Employee expense submission with receipt upload
- HR approval / rejection workflow

Assets

- Assign company assets to employees
- Track assignment and return

Announcements

- HR posts org-wide announcements with optional file attachments
- All employees receive instant notification

Team Calendar

- Visual calendar showing all approved leaves across the org
 - Filter by employee or department
-

5. Integrations

Integration	Purpose
ZKTeco Biometric Devices	Auto-capture attendance from fingerprint / face recognition devices via ADMS protocol
Email (SMTP)	Welcome emails, leave notifications, password reset, payslip alerts
Cloudinary	Profile photos, employee documents, announcement file attachments
Web Push Notifications	Browser-level push alerts for key HR events
Google Calendar	Sync approved leaves to Google Calendar (optional)
CSV / Excel Import & Export	Employee bulk import, attendance export, leave export, employee list export

6. Key Highlights

- ✔ **Role-based access control** — three distinct user roles with precise permission levels
- ✔ **Real-time attendance tracking** — live dashboard showing who is present right now
- ✔ **Biometric integration** — automatic attendance from ZKTeco fingerprint and face devices
- ✔ **Complete leave workflow** — application, approval, balance deduction, and email notifications
- ✔ **Automatic payroll calculation** — LOP, deductions, and payslip generation from attendance data
- ✔ **Multi-branch support** — manage employees and devices across multiple office locations
- ✔ **16-section employee profile** — comprehensive data including statutory, banking, and documents
- ✔ **CSV / Excel reports** — downloadable attendance, leave, and employee reports
- ✔ **Multi-organization support** — isolated data for each organization on the same platform
- ✔ **Secure authentication** — 2FA (TOTP), password history, login history, email verification
- ✔ **Responsive web application** — accessible from any browser on desktop or laptop

7. Closing Note

This document provides an overview of the current features and functionality available in Lumos Logic HRMS. After reviewing it, we would be happy to discuss your organization's specific requirements and any additional customizations needed to align the system with your business processes.

After reviewing this document, we would be happy to schedule a discussion to understand your organization's workflows, business requirements, and any additional customizations needed. This will help us configure and enhance the HRMS to best suit your operational needs.
